

ThermEcoWat

Dear Thermauvergne Partners,
Dear ThermEcoWat Partners,
Dear beneficiaries of the Interreg SUDOE programme,

We offer you a **retrospective of the 2024 events of the European ThermEcoWat** project through this first newsletter and a selection of articles.

The ThermEcoWat project, **started in March 2024 and for a period of 3 years**, is part of **Priority 1 of the Interreg Sudoe programme: Preservation of the natural capital** of the SUDOE territory and **adaptation to Climate Change** and in Specific Objective 2.5 Access to water / sustainable water management. It brings together **8 partners in 3 countries of South-West Europe**: France, Spain and Portugal.

We'll keep you informed of all the news of the project in our next newsletters.

Happy reading and happy holidays !

Marion ROUSSEL
Project coordinator

Kick-off meeting of the ThermEcoWat project

In March 2024, the ThermEcoWat project was **launched with a consortium of 8 partners**, aiming to strengthen the resilience of thermal territories to the growing challenges of climate change.

ThermEcoWat, a project of the Interreg Sudoe programme led by Thermauvergne, brings together elected officials, scientists and stakeholders from South-West Europe to **work on a more resilient thermal resort model**. This innovative project aims to optimize the management of water resources while promoting sustainable territorial development through dynamic transnational cooperation.

Delivery of ERDF grant agreements

for the ThermEcoWat project

A seminar on project management was organised in Santander, marking the handing over of ERDF grant agreements to the partners of the 34 approved projects. This event provided an opportunity for learning and exchange between territorial actors from South-West Europe in order to maximise the impact of these European initiatives.

1st Transnational Workshop of the European project ThermEcoWat in Royat, France

On 19 and 20 June 2024, Thermauvergne welcomed the European delegation ThermEcoWat to Royat for a workshop focused on data management and the use of thermal waters for energy purposes. French, Spanish and Portuguese elected officials, technicians and scientists tried to develop a working method, enriching their discussions with a visit to the thermal facilities and the energy platform of Evaux-les-Bains, a unique site in France.
